

SHEETING & SHORING

Sheeting, shoring and support of excavation work has been a core component of C.A. Murren for more than 20 years. C.A. Murren has the capabilities to provide a design-build shoring system or to install a pre-designed shoring system that meets your needs. Our crews consist of certified welders to ensure that waler and struts are installed correctly. We understand that the selection of the correct shoring system has an effect on the project as a whole, and that the most cost-effective shoring system may not always produce the lowest cost to the project. Our projects range from a few piles to thousands of square feet of support.

We have equipment to meet the needs of your project scope and durations, and we specialize in the following types of sheeting and shoring:

- Beam and Waler System
- Foundation Underpinning
- Groundwater Cutoff Walls
- Geo-Containment Systems
- Soldier Pile and Lagging
- Sheet Piling
- Tiebacks and Rock Anchors
