

# STEEL ERECTION

The steel erection projects undertaken by C.A. Murren & Sons range from 75 to 4000 tons of structural steel, and the workforce ranges from 75 to 150 ironworkers. Our top priority is their safety.

In-house engineering skills, heavy rigging expertise, and hands-on ability allow us to plan and orchestrate safe, civil, steel erections. Our skilled erectors have the innovative ideas, technical ability and can-do spirit to get the job done.

As an AISC Certified Erector, our quality control and project management procedures are among the best in the industry.
